DETAILED ACTION

1. The Applicant's amendment filed on March 15, 2011, was received. Claim 10 has been amended. Claims 1-9 and 11-17 have been cancelled. Therefore, Claim 10 is pending in this office action.
2. The text of those sections of Title 35, U.S.C. code not included in this action can be found in the prior Office Action issued on January 19, 2011.

Claim Rejections - 35 USC § 103

3. The rejection of Claim 10 under 35 U.S.C. 103(a) as being unpatentable over Reimers et al. (US 6,416,904 B1) in view of Fukumura et al. (US 6,027,835) has been overcome based on the amendment to the claim.

Reasons for Allowance

4. Claim 10 is allowed.
5. The following is an examiner's statement of reasons for allowance: the instant invention is drawn to a method of producing a cell electrode plate comprising a band-like core member made of metal foil, the method comprising: applying and drying a plurality of sheets of electrode active material discontinuously on and longitudinally of at least one of upper and lower surfaces of the core member; and pressing the sheets by press rolls of a roll press machines; and trimming, after the pressing, end portions of the sheets and the core member so that the sheets and the core member have common

Art Unit: 1726

end positions widthwise of the core member, wherein a first sheet of the sheets of electrode active material applied on one of the upper and lower surfaces of the core member has end positions widthwise of the core member which are different from end positions of other sheets of electrode active material widthwise of the core member, and the axial positions of the press rolls at which the end positions of the first sheet widthwise of the core member contact are different from the axial positions of the press rolls at which the end positions of other sheets widthwise of the core member contact to thereby provide the sheets of electrode active material on said core member.

The most pertinent prior art has been presented. The prior art does not teach the claimed invention.

With regard to Claim 10, the closest prior art, Reimers et al. (US 6,416,904 B1) in view of Fukumura et al. (US 6,027,835), does not teach or fairly suggest a method of producing a cell electrode plate comprising a band-like core member, a plurality of sheets of electrode active material discontinuously applied on the core member, wherein a first sheet of the sheets of electrode active material applied on one of the upper and lower surfaces of the core member has *end positions widthwise of the core member which are different from end positions of other sheets of electrode active material widthwise of the core member*, and *trimming*, after the pressing, *end portions of the sheets and the core member so that the sheets and the core member have common end positions widthwise of the core member*.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 1726

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
